Abstract (en)  
[origin: WO2004074131A1] Disclosed is a foil pocket (10) comprising at least one carrier foil (11) and at least one lidding foil (12). A foil-type or sheet-type product (1) is enclosed in a gas-tight and moisture-proof manner between the carrier foil (11) and the lidding foil (12), i.e. the joined parts, and is surrounded by a joining zone (30). At least one joining zone section (33, 34, 43, 44) which is not disposed perpendicular to the tear-off peeling direction (9) and is located laterally next to the product (1) widens and/or narrows in the joining zone (30) transversal to the tear-off peeling direction (9). At least the first quarter of the joining zone section (13, 43) that is not disposed perpendicular to the tear-off peeling direction (9) is provided with no widened area (35-41) and/or no narrow area (55-58). The invention makes it possible to create a primary packaging which dispenses with the use of auxiliary means such as gloves, tweezers, or similar for applying systems containing active substances.
