Abstract (en)
[origin: US2006162129A1] The invention relates to a textile machine, in particular to a carding machine, a drawing frame or a combing machine comprising at least two electrical drives (30, 40, 50, 60) whose operating modes are synchronised with respect to a master functionality for actuating the machine elements, in particular the drawing elements for fibre material, measuring elements, transporting elements and/or storing elements. Said machine also comprises at least one measuring device (33, 43, 53, 63, 34, 5, 9, 54) for measuring actual measurand values relating to actuation and/or to fibre material. The inventive carding machine is characterised in that at least one control and/or adjusting unit (19, 131, 141, 151, 161) makes it possible to modify the master function with respect to the actual values.
