Abstract (en)

[origin: FR2851391A1] The system has signal processing units that are distributed into a base band module (21) and a radio frequency module (22). Each of the modules collects two components on a substrate in a case that is mounted on a printed circuit. Each of the modules exchanges digital signals on a digital interface (23). The digital signals are distributed on the outputs of the modules. An independent claim is also included for a radio communication device.
