Abstract (en)

[origin: FR2851384A1] The method involves implementing a simple carrier pilot signal and transmitting a data transmission signal as per a multiple carrier modulation. Response of a transmission channel is estimated from the transmitted data transmission signal based on the simple pilot signal. A frequency band utilized for the pilot signal on the transmission channel includes a frequency band utilized for the transmission signal. An independent claim is also included for a cellular telecommunication system.
