Abstract (en)
An electrical household appliance is described comprising an internal chamber (3) and a structure with a front panel (2) provided with an opening (5) for the access to said internal chamber (3). The electrical household appliance (1) comprises a door (6) suitable to close said opening (6) and means for the hinging (7) of the door (6) to the rim (8) of the opening (5); the hinging means (7) are suitable to move the door (6) from a closing position (A) of said opening (5) to an opening position (B) for the access to the internal chamber (3). The electrical household appliance (1) comprises means for the coupling (9) of the door (6) to the front panel (2) suitable to cooperate with said hinging means (7) in order to assure the closing position (A) of the door (6) and operable in order to allow the opening of the door (6). The hinging means (7), after the operation of said coupling means (9), are suitable to determine the opening position (B) by means of the movement of the door (6) upward. <IMAGE>
