Abstract (en)

The method involves prefabricating a structural work comprising a main structure (S1) with portal shape and installing a carrier (20) between lateral shells. An existing lane is interrupted, and a slope is eliminated to create a space for receiving the prefabricated work. The prefabricated work is moved vertically and horizontally through a device to bring it in a working position. The slope is repaired for the structural work. Independent claims are also included for the following: (A) a structural work for making underpass (B) a device for displacing a structural work.

Abstract (fr)

L'ouvrage est essentiellement constitué d'une structure principale auto-porteuse (S1) constituant un portique qui sera construite à proximité du talus et mise en place dans le talus aux moyens de chariots de transport (20). L'invention s'applique notamment à la création d'une voie routière ou ferroviaire sous une voie existante. <IMAGE>
