Abstract (en)  
[origin: EP1596049A1] The connecting device has a pipe implemented as exhaust entrance pipe and a following pipe having a catalyst provided with an isolation and connected to the exhaust entrance pipe with compression joint. A front side flange (9) of the exhaust entrance pipe (2) has a ring element (10) and connected in a V-shaped cross section. An angular surface (15) faces the ring element (16) which is angular in cross section and which supported with the pipe (3). The front side flange of the exhaust entrance pipe is arranged radially and extends outward in one level (X-X) with a facing connecting flange (11) of the V-shaped ring element, which spreads from the outside the pipe.
