Abstract (en)

[origin: EP1596126A1] The lamp has an optical unit (16) with a central zone (Z0) and two annular zones (Z1, Z2). Output surface of the central zone and/or output surface of the annular zone (Z1) are constituted of multiple annular sectors of distinct profiles. The sectors and optical refraction units distribute light rays forward so that light flux forms regulatory lighting or signaling beam, at the output of the optical unit. An output surface of the annular zone (Z2) has the optical refraction units. The light rays are distributed forwards along nonparallel directions. The light flux is emitted by a light source (12).
