Abstract (en)

[origin: EP1596152A1] The electric illumination device is turned on or off by a switch (6). The switch is designed and is arranged so that it is forcedly operated to switch on the illumination when the sight (1) is correctly attached to the firearm (2) by operating an operating member (8) provided for deploying the firearm so that it is ready to fire. An independent claim is included for a retrofitting set for a sight.
