Abstract (en)

[origin: EP1596351A2] The method involves storing in the memory of a data processing device the text constituents in different languages. A preselection process defines which language will be used for the marking. The data processing device selects the corresponding text constituents in the preselected language from the memory that correspond to each text constituent of an input data set. The marking letters are assembled with the selected text constituents to form an output data set.
