Abstract (en)
[origin: EP1596477A1] A cap (6), which covers a connector body (1) when put in place on printed circuit board (C) to provide shielding against electromagnetic radiation, has a front face (7) with bottom end suitable for coming into contact with the surface of the printed circuit board. The front face is provided with a cut-out (8) of profile corresponding to the profile of top surface (4) of the connector body. The connector body suitable for being secured to the printed circuit board comprises a shell surrounding the outer contact (2) of the coaxial connector over half of the periphery of the coaxial connector. The connector body includes a planar bottom surface suitable for pressing against the surface of the oriented circuit board, and a convex top surface of profile with a section that is curvilinear or polygonal.
