Abstract (en)

[origin: EP1596630A2] The aid has a housing (I), and a display device (A) that is formed as an electrophoretic display on the housing, where the display is flexible and thin. The display device is laid on the housing with a coating technology. The display is utilized to indicate charge status information of a battery of the aid. The display requires power only for the modification of the indicated information.
