Abstract (en)

[origin: WO2004073403A1] The invention relates to a method for producing a water-dispersible plant protection agent granule, involving steps A and B. Step A consists of spraying two or more separate liquid streams in an agglomeration device, whereby: a) at least one of the liquid streams contains one or more agrochemical active substances with a melting point of greater than or equal to 120 DEG C, and; b) at least one of the liquid streams contains one or more agrochemical active substances with a melting point lower than 120 DEG C and one or more carriers. Step B consists of agglomeration.
