Abstract (en)
[origin: US2004108426A1] A suspension device includes a main member, at least one support member extending from the main member and having a first interference fit with a container, and at least one wall member extending from the support member and having a second interference fit with the container. The first interference fit is capable of resisting relative movement of the suspension device and the container in a first direction and the second interference fit is capable of resisting relative movement of the suspension device and container in a second direction transverse to the first direction.
