Abstract (en)
[origin: US2004135316A1] A method for exhibiting a card game, such as a poker game, in which graphic and text data is superimposed on continuous video images of the game in progress to inform the video viewing audience of each player's cards and each player's bets. In this manner, the video viewers can get the feel of the game from each player's perspective while viewing the game at the same time. The graphic and text data is superimposed on the video image in the form of pop-up boxes which can be selectively displayed in an unobstructive manner.
