Abstract (en)
[origin: WO2004074076A2] An anti-theft device for vehicles steered by a handlebar attached to a fork (2,3) accommodating a front wheel, comprising first means (12) for attachment to the handlebar and second means (4,5,6) for attachment to the fork, means (7, 11, 18, 19, 20, 24) for coupling between the first and second attachment means, an actuating device (21, 22, 23) having two positions, obstructing any relative movement between the first two attachment means when the vehicle is in a position of use and enabling free rotation between the first and second attachment means when the anti-theft device is in a locked position. The actuating device comprises a locking mechanism (18, 21, 26) which is locked when the actuating device is in an anti-theft position and which is activated, when the actuating device is in a position of use, independently from the relative positions of the handlebar and the fork.
