Abstract (en)

[origin: WO2004039685A1] The invention relates to a container for fluid substances (2) like pastes or creams. The inventive container comprises a hollow deformable body (1) containing a fluid substance and having input and output channels (3) which are provided with input and output orifices on the ends (4) thereof, and also a closing element (5) which can be connected to the input and output channels (3) in such a way that the fluid substance (2) is precluded from being discharged. Said container also comprises a pusher (6) arranged in the hollow body (1) in such a way that the fluid substance (2) is disposed in a space between the input and output orifices (4) and the pusher (6). Said pusher being devoid of any liaison (6), is arranged inside the hollow body (1) in such a way that it can slide by the action of an external push.
