Abstract (en)

[origin: US2006032101A1] The invention relates to a trigger system for small arms, said system including a hammer, a catch associated with the hammer, a trigger, and a trigger bar which co-operates with the trigger and has a first locking edge for engaging with a first fire locking element of the hammer. The aim of the invention is to create a trigger system which has a low trigger resistance and remains operable even in the event of firing failure. To this end, the trigger bar has a second locking edge for engaging with a second fire locking element of the hammer.
