Abstract (en)
[origin: WO2004077305A1] The invention relates to a system and method for managing and exchanging the data relating to a technical project, a technical installation and/or individual installation components, in particular relating to an automation project. Said system comprises a data processing installation (2) with a conversion device (4) for converting data from at least one proprietary data format into a standardised data format and vice versa. The conversion device (4) allows at least one piece of information given in a proprietary format to be assigned to at least one piece of information given in a standardised data format and/or vice versa by means of at least one data assignment. In addition, the conversion device (4) is configured to detect the corresponding data assignment for at least one piece of information given in a proprietary data format from the existing data assignments and to use said detected data assignment to convert the respective proprietary information into standardised information specified in the data assignment and/or to detect or retrieve the corresponding data assignment for at least one standardised piece of information in the data assignments contained in the conversion device (4) and to use said data assignment to convert the standardised information into proprietary information specified in the data assignment.
