Abstract (en)

[origin: WO2004077644A2] The invention relates to a spare part set for a gearmotor series comprising transmissions actuated by electric motors. According to said invention, the series has at least one dimension which can be characterised by at least one physical, mechanic and/or geometrical value, in particular by nominal power, axis height or torque. Each electric motor comprises at least one crankcase, a rotor provided with a rotor axis and a side-shield for a motor bearing arranged within a given size. The crankcase comprises an interface with the side-shield for a motor bearing, which is selected in such a way that at least two different embodiments thereof are connectable to the said crankcase.
