Abstract (en)
There is provided an attachment structure for joining two parts of a tubular pole (1), wherein the end of one part has a portion (2) of reduced cross-section to fit within the end of the other part (3), said portion having a screw thread (4) formed therein, and the other part having indents (5) punched inwardly which are staggered circumferentially and axially from one another to correspond to the pitch of the screw thread (4) and are of a depth to engage within the screw thread (4). <IMAGE>
