Abstract (en)

[origin: EP1600077A1] The device has a deformable hair curler (2) extending along a longitudinal axis (X), and a ring (4) sliding along the axis. The ring permits a user to change the hair curler from a cylindrical configuration permitting a curling of a hair mesh on the hair curler, to a tapered configuration in which the curler has a radial dimension lesser than the cylindrical configuration in order to extract the curler from the hair mesh. An independent claim is also included for a method of curling of a hair mesh by utilizing a hair mesh curling device.
