Abstract (en)

[origin: EP1600400A1] The process involves packing an elongated object in a layer of roller mattresses connected together by folding lines, where length of each mattress is made equal to semi-perimeter of transversal section of the object. Cardboard ferrules (6) passing through ends of an object package (10) are supported on each end of the package, where the object is held at a distance from the ferrules. A plastic film envelops the package. Independent claims are also included for the following: (A) a device permitting to realize a process for packing an elongated object (B) use of an elongated object packing process for packing roller blind and awning blind.
