Abstract (en)

A method of producing a gas boiler (1) having a water/fume heat exchanger (4), in turn having a casing (8) and a pipe (9) housed inside the casing (8), includes cutting a straight pipe length (18) having fins (20, 21, 22, 23) and of a given length (L1) to form the pipe (9); removing the fins (20, 21, 22, 23) from opposite end portions (18a) of the pipe length (18); coiling the pipe length (18) about an axis (A2); and forming fittings directly on the end portions (18a) of the pipe length (18) to facilitate connection of the pipe (9) to a water circuit (7) outside the heat exchanger (4). <IMAGE>
