Abstract (en)

[origin: WO2004080247A1] System for holding electronic information displays (8) at a shelf and comprising a profile element (1), which when mounted extends along the entire length of the shelf or a section of the shelf and which comprises a mounting portion (2) designed for allowing the profile element to be mounted at a front edge of the shelf. For allowing great flexibility concerning the design and positioning of different individual displays, independent of each other, the profile element (1) comprises a support portion (3) intended to be able to support a plurality of short display holders (4). Each display holder comprises a fixation portion (4') for attaching the display holder at any position along the profile element and a holder portion (4'') for holding an electronic information display (8). The support portion (3) of the profile element (1) and the fixation portion (4') of the display holder exhibit co-operating members (5, 6, 7, 7', 9, 9', 10, 11, 11') for snap-fit attachment of the fixation portion at the support portion. The invention also concerns a display holder for such a system.
