Abstract (en)
[origin: US2006032080A1] The invention relates to a device for spinning liquid out of a wiping body, which is mounted on a wiping head of a surface cleaning device, comprising a container, in which a wiping head mount is mounted rotatably, into which mount the wiping head can be inserted together with the wiping body and which can be driven rotationally about an axis of rotation by means of a drive device in order to remove moisture from the wiping body. In order to further develop the device in such a manner that its power consumption can be kept to a low level, it is proposed according to the invention that the device comprises a measuring element for determining a degree of drying or a spin drying time of the wiping body, there being associated with the measuring element an indicating unit for indicating when a specific degree of drying has been reached or a specific spin drying time has elapsed.
