Abstract (en)

[origin: WO2004073689A1] Use of a silica or silica derivative such as, e.g., Aeroperl(R) as a sorption material for oils or oily-like materials. The silica or silica derivatives has the ability to be loaded with a relative high amount of the oil or oily-like material and this ability is especially useful concerning formulation of pharmaceutical compositions comprising a drug substance suffering from e.g. bioavailability and/or water-solubility problems. Furthermore, the silica or silica derivative has the ability to release the oil or oily-like material when contacted with an aqueous medium and/or it has suitable tableting properties.
