Abstract (en)
[origin: WO2004078286A1] The invention relates to a sliding board, particularly a ski, comprising a sliding surface, an upper shell, optionally, a core, steel edges, an upper belt and lower belt, and comprising at least one interface element, which is joined to the sliding board body and which is provided for mounting at least one binding element on the top surface of the sliding board. The interface element(s) (10) is/are shaped onto lateral flanks (6) that extend along the longitudinal sides of the ski. These lateral flanks (6) have been bound in the sliding board construction during the production of the sliding board.
