Abstract (en)

[origin: WO2004078301A1] In transportation vehicles, in particular passenger aircraft for long-haul flights, it is a problem to provide ways of occupying children, which offer a certain freedom of movement without disturbing the other passengers. Such a children's play area should be easily monitored as well as economical with regard to cabin lay-out, i.e. without necessitating a significant loss in seating capacity. The present invention provides for a children's play container in the cabin area on the level of the passenger deck, which when folded away has dimensions compatible with aircraft fixtures and in its assembled state at least one side wall may be folded outwards along the lower horizontal edge onto the floor and forms part of a play area, the inside of the children's play container incorporates playing equipment and fixtures for child care, which are accessible by opening at least one side wall.
