Abstract (en)

[origin: WO2004050474A1] The inventive boat (1) comprises a rocking bar (4) which can be actuated by a muscular force and whose lever arms (6, 7) are respectively connected to a support (10,11) by means of a swing joint arm: Said support (10, 11) can be raised and lowered and is provided with an aileron (12, 13). Said rocking bar (4) can be actuated by a seat (14) which can rock around an axis (21) extending to a displacement direction. Said boat also comprises at least one other driving device which is moved by rocking and can actuated by the seat of the rocking bar (4) for driving the boat.
