Abstract (en)
[origin: FR2848189A1] The container (1) includes a frame (2) covered by an overlay (3) of membranes (4,4a,4b....4m,4n), such as fluid resistant plastic, metallic or tissue sheets. Each of the membranes includes adhering elements for coupling contact faces (A,B) of contiguous membranes with one another, and the sheets can be separated by peeling one from another. Adhering of the membranes to one another can be carried out by adhesive, electrostatic polarisation of the membranes, or e.g. use of mechanical fastening elements. An Independent claim is included for a method of using the above container.
