Abstract (en)
[origin: WO2004070150A2] The invention relates to an aesthetic and inexpensive pivotal blind that is installed in hermetically sealed double pane packets. In the inventive blind, the upper spacer section (1) of the double pane packet (2) forms the body, the control mechanism (3) is formed by a longitudinally displaceable element, which is advantageously provided in the form of strip and which is horizontally situated inside the upper spacer section (1). A pushing or pulling motion of the control mechanism (3) is initiated via a rigid element (12). The blind is equipped with limiters (16) for preventing the slats (6) from coming into contact with the panes (2) and for preventing the coating thereof from being damaged.
