Abstract (en)

[origin: EP1602307A1] The bag has a sleeve pack (1) with an upper sheet (2), an intermediate sheet and a lower sheet (30). The sheet (2) has an orifice (4), and the intermediate sheet is cut so that a flap (20) having an orifice slides between end positions where the pack is opened and closed. The contour of the orifice (4) coincides with the contour defining semi-perimeter of the latter orifice. The thickness of the latter orifice contour is 0.5 millimeter. An independent claim is also included for a device for connecting a dust bag in a frame of a vacuum cleaner.
