Abstract (en)

[origin: EP1602398A2] The device has front and rear holding elements (9,5) and a clamping device (2) that acts between the holding elements with which the ski shoe can be clamped between the holding elements so that the heel is free to be raised. The rear holding element is movable longitudinally (22) relative to the front holding element and the clamping device has at least one spring element that is open or without a housing that is clamped between the rear holding element and an actuating element (1) for the clamping device.
