Abstract (en)
A press machine 28 is fixed to a table 22 movable in the longitudinal direction of a strip material 21, and a moving unit 43 for moving the table 22 is provided. Even if the forced-back amount of the strip material 21 due to burrs varies according to changes of the kind of strip material 21, the table 22 and the press machine 28 can be integrally moved by the amount of variation by the moving unit 43 so that the distance between the position of processing (punching) of the strip material 21 by the press machine 28 and the position of cutting of the strip material 21 by the cutting machine 49 can be adjusted to a design value. <IMAGE>
