Abstract (en)
A medium issue apparatus supplies a plurality of continuous medium on a single transport path for issuing the medium. In a medium issue apparatus, a first medium set section and a second medium set section are disposed in parallel. In order to lead the continuous medium set in the second medium set section smoothly to the transport path of an issue unit disposed on or beneath the first medium set section, guide mechanisms are provided for guiding the continuous medium obliquely in a twisted manner, so as to lead to a medium insert section of the apparatus. <IMAGE>
