Abstract (en)

[origin: EP1602619A2] The device for the supporting of a load on a load bearing means of an industrial truck (1) has a support plate (6) which is vertically adjustable above the load bearing means by a lift drive, and which has several vertical guides distributed over one surface and in each of which is vertically guided a strut (8). A clamping device is attached to the support plate to fix the struts in a selected vertical position in the guides. An operating unit for the clamping device is provided for the selective clamping or releasing of the struts in their guides.
