Abstract (en)
A setting device (20) for a loom includes error-detecting means (21, 22) for comparing a yarn signal with a threshold level and generating an error signal based on the comparison result; a loom controller (40) for stopping the loom in response to the error signal; a setting-display unit (41) connected with the error-detecting means (21, 22) and the loom controller (40) and receiving setting data including the threshold level, the setting-display unit (41) displaying data from the loom controller (40) on a display portion (43); and a memory unit (30) connected with the setting-display unit (41) and provided for storing the yarn signal for a predetermined time period. The setting-display unit (41) reads a waveform of the yarn signal stored in the memory unit (30), and displays the waveform of the yarn signal and the threshold level on the display portion (43) in an overlapping manner. <IMAGE>
