Abstract (en)

There is provided a flush tank flush activating device (1); a flush valve (3), having a movable shutter (4) cooperating with a drain hole (5), is designed to selectively provide two different flush modes, and has two ties (26, 27) for moving the shutter and selectively opening and closing the flush valve; the ties (26, 27) are connected respectively to a mechanical actuator (9) controlled by a hand-operated button (10), and to an electromechanical actuator (6) activated by at least one sensor (7) by means of an electronic control circuit (8); and the mechanical actuator (9) and electromechanical actuator (6) act independently of each other on the shutter (4). <IMAGE>
