Abstract (en)

The drive has a rotary-to-linear conversion mechanism to convert rotary into translation movement. The mechanism has a rotary unit and a piston unit (7) that is intended to move a piston of a pump. A stepping motor (2) engages the piston unit to drive it in a linear reciprocating movement. The motor and the mechanism drive the rotary unit in a reciprocating angular movement at an angle of less than 360 degrees. An independent claim is also included for a method of controlling a pump drive.

Abstract (fr)

Un entraînement de pompe à membrane ou à piston comprend un moteur pas-à-pas (2) et un mécanisme de transformation du mouvement rotatif en mouvement translatif (6), comprenant un organe rotatif (4) et un organe de piston (7) destiné à déplacer un piston ou une membrane de la pompe, le moteur pas-à-pas comprenant un rotor couplé à l'organe rotatif, engageant l'organe de piston (7) afin de l'entraîner dans un mouvement essentiellement linéaire de va-et-vient. <IMAGE>
