Abstract (en)
[origin: FR2852226A1] The medical instrument (12) is held and manipulated by a user and or robot (28) and its position is determined by a localization system with a display screen (18). The screen is supported on the instrument housing by a strut (20) with a spacing of less than fifteen centimeters. The strut allows the screen to be adjusted for angle with respect to the instrument.
