Abstract (en)  
[origin: WO2004078284A1] The invention relates to a sliding board, particularly a ski, comprising a sliding surface (5), an upper shell (4), a core (3), optional steel edges (6), an upper belt (8) and a lower belt (7), and comprising at least one interface element (10), which is joined by means of at least one anchoring element (19) to the sliding board body and which is provided for mounting at least one binding element on the top surface of the sliding board. The core (3) comprising a laminated construction having at least two layers (3a) that are separated from one another by a prepreg layer (9). The anchoring element(s) (19) has/have been bound by the cured resin material of the prepreg layer(s) (2, 9) during the pressing process.
