Abstract (en)

[origin: WO2004078432A1] The invention relates to a tool roller (41) comprising a number of N punches (42, 43), which are mounted in a manner that enables them to rotate about a first axis (A1). At least one punch (42) is connected to a punch support (44). The at least one punch support (44) is mounted inside the tool roller (41) in a manner that enables it to move between a first stop (51) and a second stop (412). The first stop (51) defines an active final position of the punch (42), and the second stop (412) defines a passive final position of the punch (42).
