Abstract (en)
[origin: WO2004080718A1] The invention relates to a printing tower comprising at least two printing groups (01 to 08), which can be controlled independently of one another by entering data on an operating unit (14, 16). The operating unit (14, 16) is configured independently of the printing groups and can selectively exchange data with different printing groups (01 to 08).
