Abstract (en)

[origin: US2006162596A1] The invention relates to a self-inking stamp with inking from the top, comprising a housing wherein a stamp unit comprising stamp types and which is coupled to an actuation part is arranged in a displaceable manner. The housing comprises an insertion compartment having at least one insertion opening for an ink cushion container. The insertion compartment comprises, on the lower side facing the stamp unit, an opening for dyeing the stamp types in the upper turned position thereof, by placing them on the ink cushion in the container. At least one elastic retaining element for elastic placement on the ink cushion container is arranged in the insertion compartment.
