Abstract (en)

[origin: FR2852268A1] The process involves superimposing sheets of papers and folding the sheets in traversal line of adhesion in their center to form a central hinge (1). Symmetrical sheets (2) are joined around the hinge to form an end flap (4a) and a central flap (4b). An internal side of the end flap is folded to be superimposed on that of the central flap. The internal faces of the flaps receive a line of fugitive paste to close the booklet. The symmetric layers comprise a bending line (3) that is perforated at the center for facilitating the detachment of the end flap after folding the booklet.
