Abstract (en)

[origin: WO2004081859A1] A device and a procedure for smart card services where a smart card user (120) handles one or more registers over services which are initiated by messages which are transmitted from/to the smart card, where the registers are stored at/on the smart card. Device including a terminal (104) and a smart card (102). The smart card includes one or more registers (112) over the defined services. The user gets access to the service by a dialog box in the terminal and can, via a dialog box, handle services which have been initiated via messages at/on the user's smart card. In the dialog between the user and the smart card, information is asked for/requested for making the smart card service functioning. In order to after that execute the service, the user enters into his/her list over stored services, and selects the service which shall be executed.
