Abstract (en)

[origin: WO2004083533A1] A section steel having excellent adhesion to concrete and a wall body allowed to reduce the wall thickness thereof, the section steel in H-shape comprising a plurality of projections on the inner surfaces thereof, wherein where the upper side width of the projections is b_2 , the height of the projections is h , the pitch of the projections is P in a section vertical to the surfaces of the H-steel having the projections thereon, the requirements of $P/h \leq 10$ AND $P/B_2 \geq 4$ can be satisfied. The wall body using the H-steels as structural members is formed by vertically installing the plurality of H-steels in the longitudinal direction of the wall body with the flange outer surfaces thereof facing the wall surfaces of the wall body.
