Abstract (en)  
[origin: EP1605131A2] The fixing device comprises a support element and a holder (4) formed by a flat oblong element insertable between the pane seal (2) and glazing strip (1) to hook into an undercut section (6) of the strip. The device matches the shape of the strip and/or glass panel (3) so that swivel movements are prevented through an abutment fixed on the frame. The support element is supported against the glass panel as soon as force is exerted on the support element in the load direction.
