Abstract (en)  
[origin: EP1605413A2] The device has a housing for electronic components, especially including a ticket reader, whereby the housing forms a lateral limit of the passage lane. The housing has openings (3,3',3") towards the lane that can be closed by covers. At least two of the covers form supports for electrical and/or mechanical modular components, especially an identification module for tickets, a controller component for controlling an access control, a data transfer module and/or a display module. The modules can be replaced together with the associated covers. An independent claim is also included for an electronics support for use in an inventive device.
